

GENESIS SERIES

Premium Unobstructed Space

Customization Options

Available from 80' - 200' Wide

The Genesis Building Series is well suited to a variety of commercial and industrial applications, including salt and sand storage buildings, manufacturing facilities, warehousing, dairy barns and equine riding arenas. With a clear span interior, Genesis buildings offer a large amount of covered but unobstructed space for your operations.

- **Change roof slope to accommodate certain building applications**
- **Add partition walls to both add interior dividers and lower building costs**
- **Expand height of trusses as high as necessary, or add interior I-beam legs**
- **Suspend conveyors from trusses to eliminate concrete columns and maximize space**

The Ideal Choice

Energy & Exploration

The bright natural light in a fabric structure creates safe, shadow-free working environments, and reduces operating costs for the entire life of the worksite.

Warehouses

A free-span webbed truss building provides maximum storage space. With natural light permeating through the fabric, you can control your energy costs.

Fertilizer & Bulk Storage

Our Genesis Buildings easily accommodate conveyors and elevators, forklifts, racks, loaders, and other heavy machinery.

Our Benefits

Open Interior

No internal posts provides an ease of use and maximum storage capacity in all Genesis buildings.

Durability

Our Genesis buildings stand up to the harshest weather, becoming a great option in high-snow climates.

Customized Height

Genesis buildings can be customized to any height for overhead clearance space to accommodate large machinery.
